

Create an API version via postman API not supported in V10 API ? #11989

Closed Create an API version via postman API not supported in V10 API ? #11989

kostonou opened on May 5, 2023

Is there an existing issue for this?

I have searched the tracker for existing similar issues and I know that duplicates will be closed

Describe the Issue

Hello,
I'm currently trying to create a new version of my API through postman api.

I tried with exemple from [documentation](#)

POST Create a version Open Request →

<https://api.getpostman.com/apis/{apid}/versions>

Creates a new API version asynchronously and immediately returns an HTTP 202 Accepted response. The response contains a polling link to the task status API in the Location header.

This endpoint is equivalent to publishing a version in Postman app, which is the snapshot of API collections and schema at a given point in time.

Include the following properties in the request body:

- name — A string value that contains the version name.
- collections — An array containing all the collections to publish.
- schemas — An array containing the schema to publish.
- branch — A string value that contains the name of the repository branch. This property is required only for Git-linked APIs.

You can include the following optional properties:

- releaseNotes — A string value that contains the Markdown-supported version summary.

Authorization API Key

This request is using an authorization helper from collection Postman API

Body raw (json)

```
json
{
  "name": "[{apiReleaseName}]",
  "releaseNotes": "[{apiReleaseDescription}]",
  "collections": [
    {
      "id": "[{collectionId}]"
    }
  ],
  "schemas": [
    ...
  ]
}
```

Example Create Version Request

JUMP TO

- Introduction
- > Collections
- > Environments
- > Mocks
- > Monitors
- > Workspaces
- > User
- > Import
- > Webhooks
- > SCIM 2.0 - Identity
- > API Security
- > API
 - > v10
 - > Schema
 - > Version
 - > Create a version
 - GET Get all versions
 - GET Get a version
 - PUT Update a version
 - DELETE Delete a version
 - > Collections
 - GET Get status of an asynchronous task
 - POST Create an API
 - PUT Update an API
 - GET Get all APIs
 - GET Get an API
 - DELETE Delete an API
 - > v9
 - > Audit Logs
 - > Private API Network

It seems that the postman API doesn't work like described because it returns :

```
{ "error": { "name": "paramMissingError", "message": "Parameter is missing in the request.", "details": { "param": "version" } } }
```

So i tried to discover the needed schema for version, like this :

```
{ "version": { "name": "Release 8.35", "releaseNotes": "This is the first public release update." }, "collections": [ { "id": "{collectionIdLinkedToMyAPI}" } ], "schemas": [ { "id": "{schemaId}" } ] }
```

Then I'm facing an http 400 with this message :

```
{ "error": { "name": "actionIsNotSupported", "message": "This action on API Version is not supported for v10 APIs." } }
```

Does anyone know how to create a new version of API through postman API ?

Hope my issue is quite clear :)

Best regards

Steps To Reproduce

POST <https://api.getpostman.com/apis/{apid}/versions>

```
{ "version": { "name": "Release 8.35", "releaseNotes": "This is the first public release update." }, "collections": [ { "id": "{collectionIdLinkedToMyAPI}" } ], "schemas": [ { "id": "{schemaId}" } ] }
```

No response

Operating System

macOS

Postman Version

10.13.5

Postman Platform

Postman App

User Account Type

Signed In User

Additional Context?

No response

kostonou changed the title Create an API version via postman API Create an API version via postman API not supported in V10 API ? on May 5, 2023

davidespichernandez added product/postman-api on May 8, 2023

davidespichernandez self-assigned this on May 8, 2023

davidespichernandez on May 8, 2023

Thanks for your question, @kostonou!

Can you please confirm you are sending the Accept: application/vnd.api.v10+json header in your request?

davidespichernandez on May 8, 2023

@kostonou I've tested the API with an existing API and it works for me.

```
curl --location 'https://api.getpostman.com/apis/560f0dac-5d17-423e-93b5-d2dddea2d3f2/versions' \
--header 'Accept: application/vnd.api.v10+json' \
--header 'Content-Type: application/json' \
--header 'x-api-key: PMAK-XXX' \
--data '{
  "name": "v3.0",
  "releaseNotes": "Automatically created version",
  "collections": [
    {
      "id": "16473433-9e669d8b-6b3a-4020-b4d9-579a93c6efb3"
    }
  ],
  "schemas": [
    {
      "id": "351abdb9-1339-46e0-ab16-350bf5cc6056"
    }
  ]
}'
```

Are you sure the collection id is correct (linked to the API)? Does that collection appear in the list of collections on the API detail page? Is the schema id correct (the definition id)?

kostonou on May 9, 2023

Hi @davidespichernandez, i mixed tests on postman and tests via curl and i forgot to add the header 'Accept: application/vnd.api.v10+json'.

now it works, thanks !
